THE CASA GRANDE VALLEY.

nformation for Those Seeking Homes In the Garden Spot of the West.

Pinal county was organized in 1875 from portions of Pima. Maricopa and Yavapai counties, and contains an area of 5,888 square miles, or 3,635,20 acres, one-third of which could be made productive by a systematic storage of the surplus water now running to waste. Next to Maricopa it is the most important agricultural county in the Territory. It it traversed from east to west by the Southern Pacific railroad, and a branch of the great Santa Fe system is now approaching from the aorth. The objective point of this read is a connection with the Southern Pacific is also building in this direction from Tempe, and it is confidently believed that work will not cease until the Dear Creek coal fields are reached and connection is made with another branch of that road running from Eowie to Globe and now completed to Fort Thomas.

Thus it will be seen that Pinal county is the theater of railroad building at the present time, and inside of a year Florence, the county seat, will be

A RAILBOAD CENTER.

At present it contains a population of about 1500, but with the completion of these twe railroads and the Butte reservoir no city in Arizona can approach it for natural advantages, and a large increase is population will follow. Flarence is at an elevation of 1535 feet above sea level, situated near the fellin river, twenty-six miles northwest of the railroad station of Casa Grande, with which it is commerced by an elegantly equipped delly stage line. Going and coming stages run by the eld Casa Grande runs, and passongers are allowed a short time to inspect them. There are many handsome private residences in Florence, several brick stores, good hotel, as excellent graded school employing four teachers, churches, several societies, a Commercial Cinb. a newspaper (the only one in the acounty), and the handsemost court house in the Territory. Here is held the United States Court for the district composed of Gilla, Graham and Pinal counties. The streets are lined with slade trees, which impart an air of comfort on the warmest days.

PRODUCTS OF THE VALLEY.

Unlike the Salt river, the waters of the Wila are fresh and pure; the soil contains no alkali, is a deep, rich gray ash, especially adapted to the growth of the prune, olive, almoud, peach, fig. pear, apricot and fruits of all kinds, which pay largely on the investment. It is also the natural home of alfalfa, which grows in the most prolife manner. The grape does exceptionally well in this valley, and wise and raisin culture is destined to become a prominent industry. Citrus fruits have been cultivated to a limited extent; there are a number of arange trees in the seighborhood of Florence which bear their golden fruit each year without protection, and a few date palm trees are also in full bearing. The season is from six weeks to two months earlier than Southern California, which gives fruit growers an appreciated advantage in

THE BABLY MARKETS.

The absence of logs and nightly dews is a formidable obstacle to the destructive and unsightly scale-bug, and the fruits of the valley are all bright and clean. All the agricultural products of temperate and semi-tropic zones are easily grown here, the long seasons giving a succession of crops that double or treble the productive value of the land.

PRICES OF LAND.

Improved lands, with government title and water right, can be bought for from \$20 to \$50 per aern, according to location and improvements. In the immediate neighborhood and to the south of the Casa Grande ruins there are thousands of aeres covered with a heavy growth of mesquite timber yet open to settlement. These are among the choicest in the valley. Water in inexhaustible quantity is found at a depth of from twenty to thirty feet; in fact, a river seems to be flowing underneath. Here is a spiem to be flowing underneath. Here is a spiem tibles and with a pumping system of irrigation, which is said to be successful on small tracts. However, with the completion of the Butte reservoir, pumping will be a thing of the purpose of showing what can be done, and to magnify the further fact that what was once considered.

AN UNINHABITABLE DESERT

is in truth the most productive land on the globe, and that there is water in abundance to bring every foot of it under cultivation, only waiting for the magic wand of capital to develop it. There is no water-storage scheme on the Pacific coast that has one-half the natural advantages and so few engineering community.

Now, therefore, your Memorialists, the Nineteenth Legislative Assembly of the Territory of Arizona, desire to go on record as earnestly endorsing the above recommendations of the Sixth National Irrigation Congress for the following reasons:

1. The reservoir site referred to having been verified time and again.

CASA GRANDE BESERVOIR.

The reservoir of the Casa Grande Valley Canal company is the largest in the territory. It covers a surface of 1500 acres, with an average depth of 12 feet, and contains about eight thousand million gallons of water. It is situated fifteen miles southwest of Florence. A levee of earth has been thrown up across a depression in the plain 14,000 feet in length, 125 feet in width at the bottom and 25 feet in width at top, 2 to 1 slope on each side, and an average height of 25 feet. The waste is regulated by 3 cast from pipes 2 feet in diameter, set in solid masoury, regulated by gates and tower. This reservoir cost \$150,000, and supplies water for 6,000 acres.

Eastern States, and death from SUNSTROKE IS UNKNOWN

In fact, in a residence of sixteen years in Arizona the writer has only known two persons to be overcome by the heat, and they recovered. Their condition, however, was more the result of whisky than heat. The air is so dry here that a registered temperature of 100 degrees is not as oppressive as 50 degrees in St. Louis or New York, The Signal Service burean has recognized this fact, and reports the difference between the appearent and sensible temperature to be falls 30 degrees. At nearly all times there is a pleasant breeze; the nights are invariably cool in the summer, and out-door labor is performed without serious discomfort to either man or beast on the warmest days. Yery seldom does the thermometer get below the freezing point in winter, and in the gardens of Florence to-day are castor bean plants two years or more old.

UNTOUCHED BY FRONT.

UNTOUCHED BY PROST.

Orange and lemon trees require slight protection during the winter for a year or two.

While it is a popular thing for one to say that he is "not here for his health," it is an undisputed fact that for all pulmonary allments no climate on earth is equal to Southern Arizona, and there are numbers of active, industrious citizens, with but one lung, who same here years ago, expecting to live but a few weeks. But for all that, the wonderful Casa Grande valley is something better that a health resort.

That porton of the great Casa Grande yalley lying along the line of the Southern pramiseo, is our authorized agent. This paper is kept on file at his office.

Pacific railway in the vicinity of CasaGrande and Arizola is at present, and with good reason considered one of the most desirable portions of this magnificent. Southern Arizona. Great changes have been made in the angearence of this part of the valley during the last four years. It was about that long ago that the Florence canal was completed and the work of actual improvement begun. It is useless to deay that under our present water system there is nothing like a sufficient water to irrigate this vast body of land

THE CASA GRANDE VALLEY CARAL

is forty-three miles in length and covers 60,000 acres of land, about 1,000 of which are under cultivation. It is so constructed that it can be easily enlarged and its canacity increased. A reservoir covering 1,000 acres, having storage capacity of eight billion gallons, in the southeast corner of township f, range 8, gives ample supply of water the year round to all farmers located below it, but those above suffer by a shortage of water auring a few weeks in summer.

It is proposed to remedy this by the construction of a huge reservoir at the Buttes, lifteen miles northeast of Florence. Competent engineers have examined and reported upon the scheme and pronounce it feasible.

HOUSE MEMORIAL No. 4.

To the Senate and House of Representatives of the United States in Congress Assembled:

We, your Memorialists, the Nineteenth Legislative Assembly of the Territory of Arizona, respectfully rep- Mr resent that the National Irrigation Saml. White, Jr. 1008 100 Saml. White, Jr. 1009 100 Congress, held in Phoenix, Arizona, on M. Ober ... the 15th of December, A. D. 1896, Herman Cohen.

Whereas, The Pima and Maricopa Indians tribes numbering in the aggregate ten thousand souls, have been deprived of the waters used by them in irrigation before the advent of the white race in America, through the appropriation of such waters by settlers

on the headwaters of theGila river; and Whereas. Through the loss of such waters the lands once cultivated by these tribes have become barren and worthless, and the members of such tribes have become a charge on the Government, and forced by the loss of their fields into lives of degradation and penury; and

Wherens, Such tribes have from the earliest days been the friends and allies of the whiterace; and

Whereas. The people of the United States have pledged themselves by solemn treaty to protect such tribes in their property and property rights; and

Whereas. The Government of the United States has and now is engaged in the expendi-ture of hundreds of thousands of dollars for the construction of works of irrigation for the reclamation of lands belonging to other Indian tribes; therefore, be it

Resolved. That this Congress do approve the proposed construction, under the of the U.S. Geological Survey, of the Buttes reservoir, in Pinal county, Arizona, recently reported, to again reclaim the lands of these tribes, believing that by so doing can the Government alone honorably redeem the broken pledges made by it to these people, and thus preserve from further want and degradation two of the surviving Indian tribes of the American continent that have always been the constant friends of the white

Resolved. That we approve the prop construction of such reservoir not only as just and philanthropic, but as econ and good polley, as in a comparatively short time the expense of maintaining such In

be utilized by any private corporation, and the Government therefore occupies the indefensible position of doing nothing itself or allowing any one else to improve this great natural reservoir site.

2. We firmly believe that the interests of humanity dictate that the Indians should be gathered on the reservations, have lands allotted to them in severalty, and that they be furnished with farming implements and an inexhaustible supply of water for irrigation of their lands, to the end that they may become self-supporting. By this means will a home life be furnished for the Indian and he will more rapidly advance in civilization as a consequence. He will abandon his nomadic life; his children will be kept at home and educated in neighborhood schools, instead of being sent to large Indian schools at a distance where they are kept (as it would seem) for mere pursoses of show. After being instructed in the arts of civilization for a time they are returned to savagery, to become more unhappy and discontented than if they had never received the questionable advantages. We feel that the present policy of the Indian department is all wrong in this regard.

3. The Pims and Marleopa Indian reservation contains 350,000 neres of as
